

# Pevco Atlas™

Pevco Atlas™, our next generation pneumatic tube delivery management software, is built for healthcare professionals with a multi-user dashboard, tools for facility management & clinical staff, and an architecture that meets the needs of IT managers.

## KEY FEATURES:

### ACTIVE DIRECTORY INTEGRATION

Integrates with Microsoft Active Directory™ and LDAP servers to streamline sign-on and authentication

### MULTI-USER WEB APPLICATION INTERFACE

Allows facility technicians access to all controls and data at the same time clinicians see customizable delivery-specific information, all in real-time

### INTELLIGENT DELIVERY

Customizable rule building options allow authorized users to control key aspects of carrier delivery

### SQL DATABASE STORAGE

Transaction history and events are stored in a Microsoft® SQL Server database

### RUNS AS A SERVICE

Launches automatically – no need to launch application after server updates

### SECURITY SYSTEM INTEGRATION

Integrates with security applications such as Tyco C-Cure™ and Lenel OnGuard™ to identify who sends and receives deliveries

### WEB SERVICE COMMUNICATIONS

Allows other hospital information systems to request and receive delivery and system status information through Pevco's API

### BMS INTEGRATION

Easily integrates with hospital building management systems for seamless system monitoring

### VIRTUAL MACHINE & SERVER SUPPORT

Built to run on multiple platforms including servers and virtual machines
