

Transform Your Building with Visitor Management.

By using the IoT, we have created a complete range of pb3 PRODUCTS.

Each of these can either be operated independently or increase their performance when used in an integrated environment.

KEY FEATURES OF PB3 VISITOR MANAGEMENT

Our solutions cater to high-performance buildings requiring advanced integration with existing security such as Lenel OnGuard, building automation and third party systems

AUTOMATED VISITOR CHECK-IN:

Self-service kiosks equipped with touchscreens allow visitors to check in swiftly by entering a pre-received code or their name. The system automatically issues security badges and provides visitors with site-specific information, such as floor access.

ACCESS CONTROL INTEGRATION:

Seamlessly integrates with Lenel OnGuard security system to manage visitor entry and exit in real-time. Automated credential activation ensures visitors only access authorized areas, enhancing security.

PRE-REGISTRATION PORTAL:

Residents or employees can pre-register visitors through a user-friendly web portal, reducing wait times and improving visitor flow. Pre-registered visitors receive email invitations with check-in instructions and access details.

CUSTOMIZABLE BADGING SYSTEM:

Personalized badges are based on visitor type and access levels, ensuring that visitors stay within designated areas.

REAL-TIME VISITOR TRACKING AND NOTIFICATIONS:

Real-time updates on visitor movements allow for better security monitoring and resource allocation. Hosts are automatically notified upon visitor arrival, improving coordination and reducing delays.

STREAMLINED VISITOR CHECK-OUT:

Visitors can easily check out via kiosks or exit readers, ensuring a quick and efficient departure process. Badges are automatically deactivated upon exit, with reminders sent if badges are not returned.
